Her Ride

For woman by woman

Agile Product Management Capstone Project

By- Ahana Podder, Charulatha Rajanna, Apurva Turmandi

Introduction

In a bustling world, **Her Ride** emerges as a beacon of safety and empowerment for women. This innovative app is designed with a singular focus: to provide a secure and reliable transportation solution nationwide, driven by women, for women. Our mission is to foster a community where every journey is undertaken with confidence and peace of mind, enhancing mobility and independence for countless individuals across India.

At its core, Her Ride addresses the critical need for a trusted travel option. We aim to revolutionize urban commuting by prioritizing safety, comfort, and empowerment for both riders and drivers. Through intuitive design and robust features, we're not just offering rides; we're building a movement towards safer, more inclusive transportation. Join us as we redefine what it means to travel freely and confidently.

Persona

Rider Persona: Aisha Sharma

Aisha, a vibrant 28-year-old marketing professional in Mumbai, often dedicates long hours to her ambitious career. However, her evenings are frequently shadowed by the persistent worry of finding safe and reliable transport home. She prioritizes her personal safety above all else, craving a service that not only offers convenience and dependability but also grants her profound peace of mind, allowing her to fully immerse herself in her professional aspirations without a moment's fear.

Goals

- Achieve career ambitions and professional growth.
- Maintain independence and control over her schedule.
- Enjoy peace of mind knowing her commute is safe and reliable.

Pain Points

- Constant worry about personal safety during commutes, especially at night.
- Frustration with unreliable and unpredictable transportation services.
- Wasted time waiting for rides, impacting work-life balance.

Driver Persona: Priya Devi

Priya, a resilient 45-year-old mother of two from Delhi, is an experienced driver driven by the desire to provide for her family. She actively seeks a flexible income source that offers not just fair pay, but also genuine respect and a safe, empowering working environment. Her dedication and reliability are unwavering, as she eagerly contributes to her family's well-being, all while feeling secure and supported on every journey.

Goals

- Ensure financial stability and provide for her family's needs.
- Gain respect and recognition for her professional driving skills.
- Work in a safe, supportive, and empowering environment.

Pain Points

- Income instability and unpredictable earnings from

Vision

Her ride aims to transform women’s mobility in India by building a transportation ecosystem where safety, dignity, and empowerment are non-negotiable. Our mission is to enable every woman—students, professionals, mothers, and travelers—to move confidently at any hour, without fear or hesitation.

We strive to create a women-driven network that not only offers secure and reliable rides but also empowers women drivers with meaningful livelihood opportunities. By combining safety-focused technology, trust-centered design, and a supportive community, her ride seeks to redefine urban travel and contribute to a more inclusive, equitable society where mobility becomes a gateway to independence and economic growth for all women.

Product market fit

Levers	Key Assumptions	High-Level Requirements	Plan in Discovery
Lever 1: Safety & Trust Women repeatedly emphasized safety as their top priority. Trust in the platform and the driver is the decisive factor for adoption.	• Women will shift to a new ride service only if it provides a safer, more trusted environment than existing apps. • A women-driven model increases perceived and actual safety. • Real-time emergency features are expected, not optional.	• Women-only driver onboarding (ID verification, police verification). • Real-time ride tracking with SOS integrated with emergency contacts. • Driver behavior ratings and transparent profiles.	• Conduct shadow interviews of women commuters and female drivers. • Prototype emergency UI flows and test reactions to ensure clarity and usability under stress. • Validate willingness to choose female drivers even at a slightly higher fare.
Lever 2: Reliability & Service Quality Women want predictable, clean, and comfortable rides—issues often missing in current services.	• Clean, well-maintained vehicles significantly improve trust and perceived safety. • Women prefer predictable ETAs and assured availability during peak hours or late nights. • Transparent pricing reduces anxiety and builds loyalty.	• Vehicle check standards and periodic inspections. • Cleanliness score and incentives for high-scoring drivers. • Guaranteed ride availability in hotspot areas through fleet planning. • Clear pricing structure and fare transparency.	• Field tests on hygiene perception: show vehicle photos and gather trust scores. • Pilot “Preferred Driver” matching to evaluate repeat usage. • Explore partnerships for vehicle maintenance benefits for female drivers.
Lever 3: Emotional Connection & Empowerment Her Ride isn’t just a utility—it's a community-driven movement empowering women to support women.	• Women value being part of a platform that uplifts other women. • Female drivers want a supportive, safe work environment. • Social impact messaging increases retention and loyalty.	• Driver community programs (training, peer support, financial literacy workshops). • “Support Women Drivers” badges and storytelling within the app. • Driver benefits such as insurance, training, and flexible schedules.	• Interview existing female drivers from other platforms to understand barriers. • Test in-app empowerment storytelling to measure emotional resonance. • Evaluate willingness of users to pay slightly more for women-led services.
Lever 4: Convenience & User Experience The app must offer seamless usability—women prefer simple, fast interfaces.	• A clean, intuitive design increases trust and reduces hesitation during emergencies. • Women expect features tailored to their lifestyle (share ride status, preferred drivers, discreet mode).	• One-tap SOS button with voice activation. • Instant booking with accurate tracking. • Simple, non-cluttered UI with high contrast and minimal steps.	• Rapid prototyping of key screens and usability tests with women across age groups. • Evaluate effectiveness of SOS button placement and ride-sharing flow. • Conduct A/B tests for first-time user onboarding experience.
Lever 5: Pricing, Sustainability & Scale To ensure long-term success, the model must balance affordability	• Users are willing to pay a small premium for guaranteed safety. • Female drivers require competitive earnings and incentives to join	• Tiered pricing (Standard Safe Ride / Premium Safe Ride with verified drivers). • Incentive programs for women drivers during peak hours	• Test willingness-to-pay models. • Conduct small-city pilots to measure adoption. • Validate driver acquisition costs and

Requirements design

1. Business requirements (high-level)

These come directly from user interviews, the problem statement, and product-market fit levers.

Br1. Ensure women's safety during travel

- Women want guaranteed safety in all situations, especially late nights.

Br2. Build trust through women-only driver network

- Women strongly prefer female drivers for comfort and trust.

Br3. Deliver clean, reliable & comfortable rides

- Reliable etas, clean cars, and professional behavior heavily influence adoption.

Br4. Provide emergency support & real-time monitoring

- Women expect immediate, accessible help in emergencies.

Br5. Enable empowerment & economic opportunity for women drivers

- The platform must attract and support female drivers with training, community, and earnings transparency.

Br6. Offer a simple, intuitive, stress-free user experience

- Ease of use and minimal cognitive load during travel is critical.

Requirements design

2. Technology requirements (high-level)

Tr1. Secure driver verification system

- Aadhar-based KYC
- Police verification
- Document uploads
- Background check workflow

Tr2. Real-time ride tracking & telemetry

- GPS-based live tracking
- Driver location accuracy
- Ride replay visibility
- Geofencing alerts

Tr3. Emergency response architecture

- One-tap SOS
- Integration with emergency contacts
- Auto-trigger events (e.g., Long stop, route deviation)
- Panic mode backend workflows

Tr4. Clean & maintainable app architecture

- Scalable microservices
- High-availability backend
- Encrypted data storage
- Secure authentication (OAuth, JWT)

Tr5. UI/UX optimized for safety & speed

- Large, accessible emergency button
- Preferred driver algorithm
- Two-tap ride booking flow
- Reliability-first design system

Requirements design

How requirements map to charter

Charter Pillar	Mapped Requirement	Why It Fits
Safety-first	BR1, TR3, TR2	Ensures physical & psychological safety
Women-driven mobility	BR2, BR5, TR1	Builds trust, empowers women drivers
Trust & transparency	BR3, TR1, TR2	Verified drivers, reliable tracking
Reliability & comfort	BR3, TR4, TR6	Makes daily commuting predictable and comfortable
Inclusive empowerment	BR5, TR5	Supports women drivers & community building

Product backlog prioritization

User Story	Feature / Epic	Priority
As a rider, I want to sign up and log in so I can securely use the app.	Rider Onboarding (Signup/Login)	Must Have
As a driver, I want to complete KYC so I can get verified and start working.	Driver KYC & Verification	Must Have
As a rider, I want to enter pickup and drop so I can book a ride easily.	Location Selection + Geocoding	Must Have
As a rider, I want to see a fare estimate before I book.	Fare Estimation Engine	Must Have
As a rider, I want to see the driver assigned and ETA so I know when they'll arrive.	Driver Matching + ETA Display	Must Have
As a rider, I want to track my cab live so I feel safe during the ride.	Live GPS Ride Tracking	Must Have
As a rider, I want an SOS button so I can alert trusted contacts quickly.	SOS Button + Trusted Contacts	Must Have
As a rider, I want to pay using UPI or card so I can complete my trip easily.	Payment Gateway Integration	Must Have
As a rider, I want to rate my ride so I can share feedback.	Ride Rating & Issue Reporting	Should Have
As a rider, I want to schedule rides so my office/college commute is predictable.	Scheduled Rides	Should Have
As a driver, I want to see my earnings so I can track my income.	Driver Earnings Dashboard	Should Have

Product backlog prioritization

User Story	Feature / Epic	Priority
As an operations manager, I want to see safety alerts so I can respond quickly.	Safety Operations Dashboard	Should Have
As an operations manager, I want to see driver heatmaps so I can optimize supply.	Driver Heatmaps	Should Have
As a corporate admin, I want to upload employee rosters for night shifts	Corporate Roster Upload	Could Have
As an enterprise customer, I want consolidated invoices for transport usage.	B2B Billing & Invoicing	Could Have
As a rider, I want the app to work with weak network so my ride is not disrupted.	Low Network / Offline Mode	Could Have
As a rider, I want subscription benefits for frequent usage.	SafePass Subscription	Could Have
As a driver, I want optimized navigation so I can reach pickup and drop locations efficiently.	Driver Navigation (Optimal Routing)	Could Have
As a rider, I want intercity options for long travel.	Outstation Rides	Won't Have (Now)
As a rider, I want a bike taxi so I can travel cheaply.	Bike Taxi Mode	Won't Have (Now)

User Flow- Rider

App Launch & Onboarding

First time user

- User opens the Her Ride app
- Tap “Get Started”
- Mobile Number Sign-up
- Profile Setup

User onboarding complete → Redirect to Home Screen

Home Screen – Start Ride Booking

- Enter Destination
- Ride Option Selection
- Confirm Pickup Location

Driver Matching Flow

- Searching for Drivers
- Match Found

Ride Preparation

- Driver EnRoute

During the Ride

- Ride Starts
- In-Ride Experience (Live tracking, SOS/Emergency Button, Estimated arrival time)

Ride Completion

- End of Trip
- Payment
- Rating & Feedback

User Flow- Driver

Sign-up & Verification
- Driver downloads app
- Registers with phone number
- Uploads documents for verification
- Driver attends safety onboarding session

Access activated once approved

Go Online
- Driver taps “Go Online”
- System checks (GPS accuracy, vehicle compliance, safety checks)

Ride Request
- Driver receives ride request
- Sees pickup location + rider rating
- Accepts or rejects

If accepted, system navigates to pickup

Pickup
- Arrive → Tap “Arrived”
- Rider boards → Tap “Start Ride”

During Ride
- Follow GPS
- Maintain safety & comfort standards

Trip End
- Tap “End Ride”
- Earnings summary displayed

Outcome-Based Roadmap (Prioritized Feature List + Metrics)

Outcomes	Features	Priority	Success metrics
Outcome 1: Increase Rider's Sense of Safety by 50%	• SOS Emergency Button (Immediate dispatch + live location) • Real-Time Ride Tracking (shared with trusted contacts) • Verified Women Driver System	HIGH	✓ Safety perception score increases from baseline to 8.5/10 ✓ % of rides with live tracking shared ≥ 60% ✓ Verified driver ratio = 100% women drivers
Outcome 2: Build Trust in Drivers & Platform	• Driver Safety Badge + Background Check Status • Driver Training & Safety Orientation • Pre-Ride Identity Confirmation (Driver + Vehicle)	HIGH	✓ Trust score improves to 8+/10 ✓ Incidents per 10,000 rides < 1 ✓ Driver onboarding rejection rate > 30% (shows strict quality)
Outcome 3: Reduce Ride Cancellations by 30%	• Smart Driver-Rider Matching Algorithm • Cancellation Shield (protect rider time) • Accurate ETA Prediction Engine	HIGH	✓ Ride cancellation rate drops by 30% ✓ Average wait time < 6 minutes ✓ ETA accuracy ≥ 85%
Outcome 4: Improve Comfort & Cleanliness Experience	• Comfort Rating System (Cleanliness, behaviour) • Driver Incentives for High Comfort Scores • Vehicle Condition Checklist (weekly)	MEDIUM	✓ Average comfort rating ≥ 4.7/5 ✓ Vehicle cleanliness complaints reduced by 50% ✓ Drivers earning bonuses ≥ 20% (behaviour improvement)
Outcome 5: Increase Driver Retention to 70%	• Driver Earnings Dashboard 2.0 • Weekly Goal Rewards • Women Driver Skill Workshops (Driving + Safety)	MEDIUM	✓ Driver retention increases to 70% ✓ Avg driver earnings/hour increases by 20% ✓ Training completion rate ≥ 85%
Outcome 6: Enable More Women to Join as Drivers	• Car Leasing / Rent-to-Own Program • Zero-interest Microloan Partnerships • Community Support Groups	LOW–MEDIUM	✓ New driver acquisition grows by 40% ✓ % of drivers without personal vehicle ≥ 30% onboarded ✓ Loan repayment rate ≥ 90%

MVP Timeline

Phase	Timeline	Objectives	Core Features (Prioritized for Max Value & Learning)	Expected Outcomes
Phase 1: Foundations & Validation	Week 1–2	Validate user needs and core problem-solution fit	• User Registration (Phone/Email) • Basic Rider Profile • Secure Login • Safety Settings (Emergency Contact)	• Confirm demand and core usability • Establish baseline safety expectations
Phase 2: Core Ride Booking MVP	Week 3–5	Enable women to reliably book safe rides	• Location Search (Pickup/Drop) • Ride Request Flow • Driver Matching (Prototype) • Fare Estimate (Basic)	• Users can request and complete rides • Identify key friction points
Phase 3: Safety & Trust Layer	Week 6–7	Build essential trust to drive early adoption	• SOS Button • Live Trip Tracking • Verified Women Drivers • Driver Rating & Review	• Increased rider confidence • Reduce early churn
Phase 4: Payments & Efficiency	Week 8–10	Improve end-to-end experience & retention	• In-App Payments (UPI/Card) • Trip History • Ride Cancellation Flow • Basic Customer Support Flow	• Reduced drop-offs at payment stage • Improved repeat rides
Phase 5: Learning & Optimization	Week 11–12	Analyze validated learning and iterate	• Bug Fixes & Performance Enhancements • Journey Optimization • Early A/B Tests • Metrics Dashboard (Internal)	• Clear direction for Version 2.0 • Prioritized backlog for next release

Business model canvas

Customer Segments
- Daily commuters
- Students
- Night-shift employees
- Women riders
- Drivers seeking stable earnings

Key Partners
- UPI/Card payment gateways
- Map & routing providers
- KYC/verification vendors
- Corporate employers
- Insurance partners

Cost Structure
- Cloud & map API costs
- Support & operations team
- Driver incentives
- Marketing & acquisition
- Compliance & insurance

Customer Characteristics
- Safety-focused
- Price-sensitive
- Prefer digital payments
- Expect transparency & reliability

Revenue Streams
- Ride commissions
- Surge revenue
- Subscriptions
- Corporate transport billing

Pricing Model
- Base fare + km/min pricing
- Surge multipliers
- SafePass subscription
- B2B monthly billing

Key Resources / IP
- Matching algorithm
- Routing + ETA engine
- Safety & SOS stack
- Operations dashboards
- Driver scoring models

Customer Journey
1) Open app → 2) Enter pickup/drop → 3) View fare → 4) Book → 5) Track ride → 6) Pay → 7) Rate

Value Proposition
- Safe & reliable rides
- Transparent pricing
- Women-first safety features
- Smooth payments
- Corporate travel solutions

Key Activities
- Driver onboarding
- Matching & routing
- Safety monitoring
- App & backend development
- Customer/driver support

Risks / Concerns
- Strong competition
- Driver churn
- Safety incidents
- Regulatory caps
- Map API cost spikes

Financial KPIs
- Take Rate (% commission per ride)
- Cost per Acquisition (CAC)
- Customer Lifetime Value (CLTV)
- Monthly Active Riders (MAR)
- Trip Success Rate
- Revenue per Trip
- Gross Margin
- Driver Utilization Rate

User feedback integration

What	Simple Explanation
How We Collect Feedback	• Ask for rating after every ride • Let users choose quick reasons (e.g., “Driver was polite”, “Cab was late”) • Allow short comments• Small surveys sometimes • Support messages from chat/email • App Store reviews
How Feedback Is Organized	• All feedback stored in one place • Grouped by type: bugs, design issues, safety, driver behavior
How Feedback Goes Into Development	• Safety issues sent to Operations team immediately • Repeated problems added to upcoming sprints • Developers fix highest-impact issues first
How We Improve Continuously	• Weekly review of top complaints • Fix repeated issues quickly • Use feedback to help drivers improve • Update app features where users struggle • Inform users when improvements are made

Sprint planning

Sprint	Timeline	Epic	User Story	Tasks	Story Points	Dependencies
S1	Week 1-2	Rider Onboarding	Rider sign-up via mobile OTP	UX flow → UI screens → FE OTP → BE validation → QA	5	None
S1	Week 3-5	Rider Onboarding	Create rider profile	UX fields → UI design → FE form → BE save → QA	3	OTP sign-up
S1	Week 6-8	Rider Onboarding	Edit personal details	UI states → FE update → QA	3	Profile creation
S2	Week 8-10	Ride Booking & Tracking	Select pickup & drop location	UX flow → UI inputs → FE location logic → QA	5	Rider logged in
S2	Week 11-13	Ride Booking & Tracking	View fare estimate	UI fare component → FE display → QA	3	Pickup & drop selected
S2	Week 14-16	Ride Booking & Tracking	Confirm ride request	UI confirm → FE request → BE handling → QA	5	Fare estimate
